What we will cover

- The FLSR object

What we will cover

- The FLSR object
- Creating an SR object from a Stock object

What we will cover

- The FLSR object
- Creating an SR object from a Stock object
- Selecting a stock recruitment model

What we will cover

- The FLSR object
- Creating an SR object from a Stock object
- Selecting a stock recruitment model
- Fitting a stock recruitment model

What we will cover

- The FLSR object
- Creating an SR object from a Stock object
- Selecting a stock recruitment model
- Fitting a stock recruitment model
- Plotting a stock recruitment model

What we will cover

- The FLSR object
- Creating an SR object from a Stock object
- Selecting a stock recruitment model
- Fitting a stock recruitment model
- Plotting a stock recruitment model
- Comparing between stock recruitment models

What we will cover

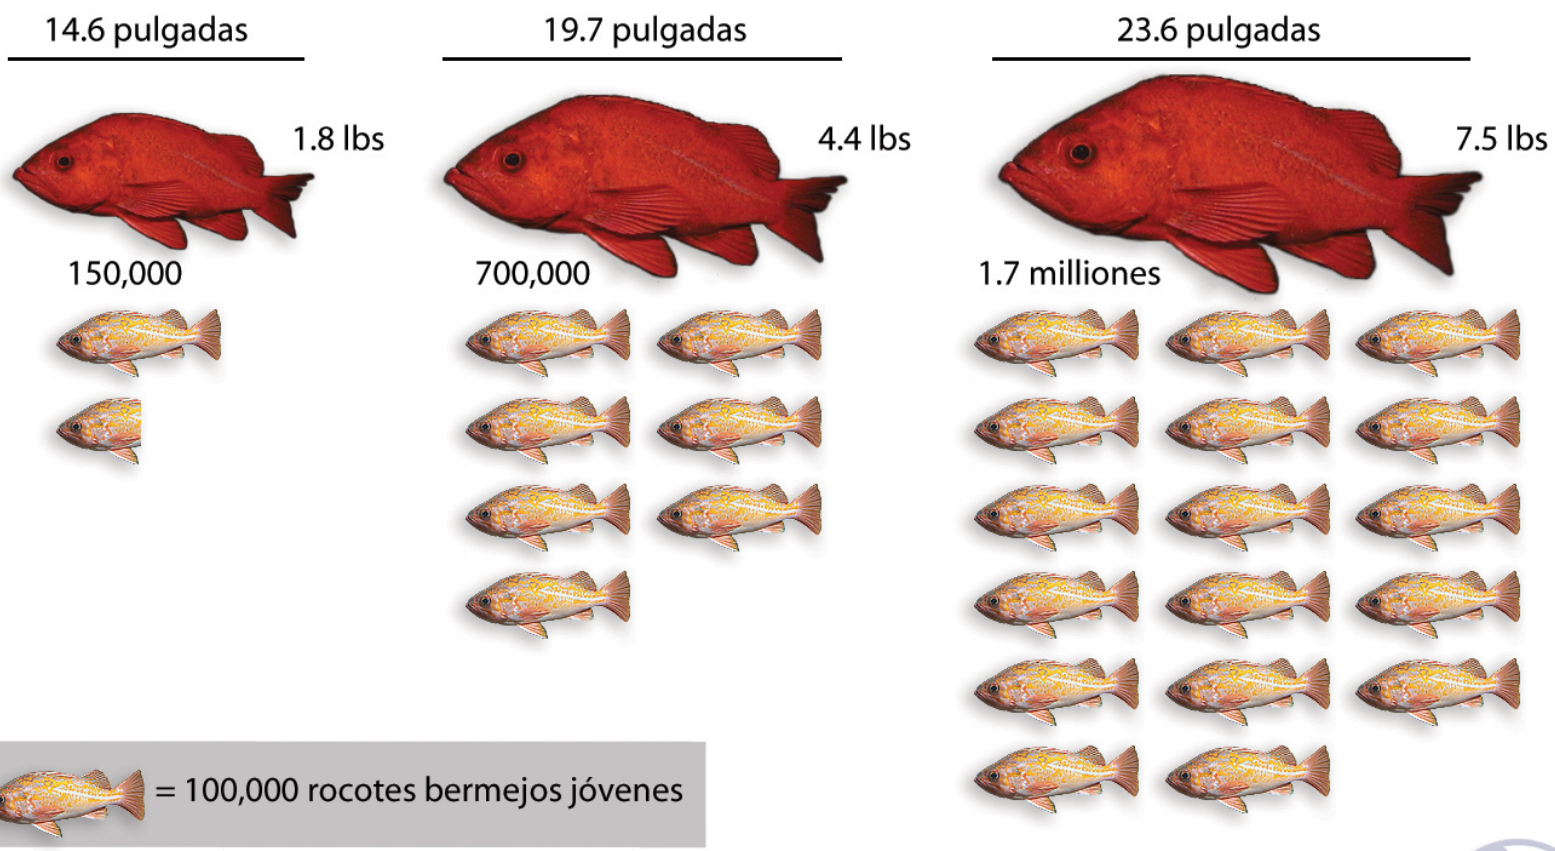
- The FLSR object
- Creating an SR object from a Stock object
- Selecting a stock recruitment model
- Fitting a stock recruitment model
- Plotting a stock recruitment model
- Comparing between stock recruitment models
- Predicting new recruitments

What we will cover

- The FLSR object
- Creating an SR object from a Stock object
- Selecting a stock recruitment model
- Fitting a stock recruitment model
- Plotting a stock recruitment model
- Comparing between stock recruitment models
- Predicting new recruitments
- Fixing a parameter in a fit

To start, open an R session and load the `FLCore` library by issuing the command:

```
library(FLCore)
data(ple4)
```

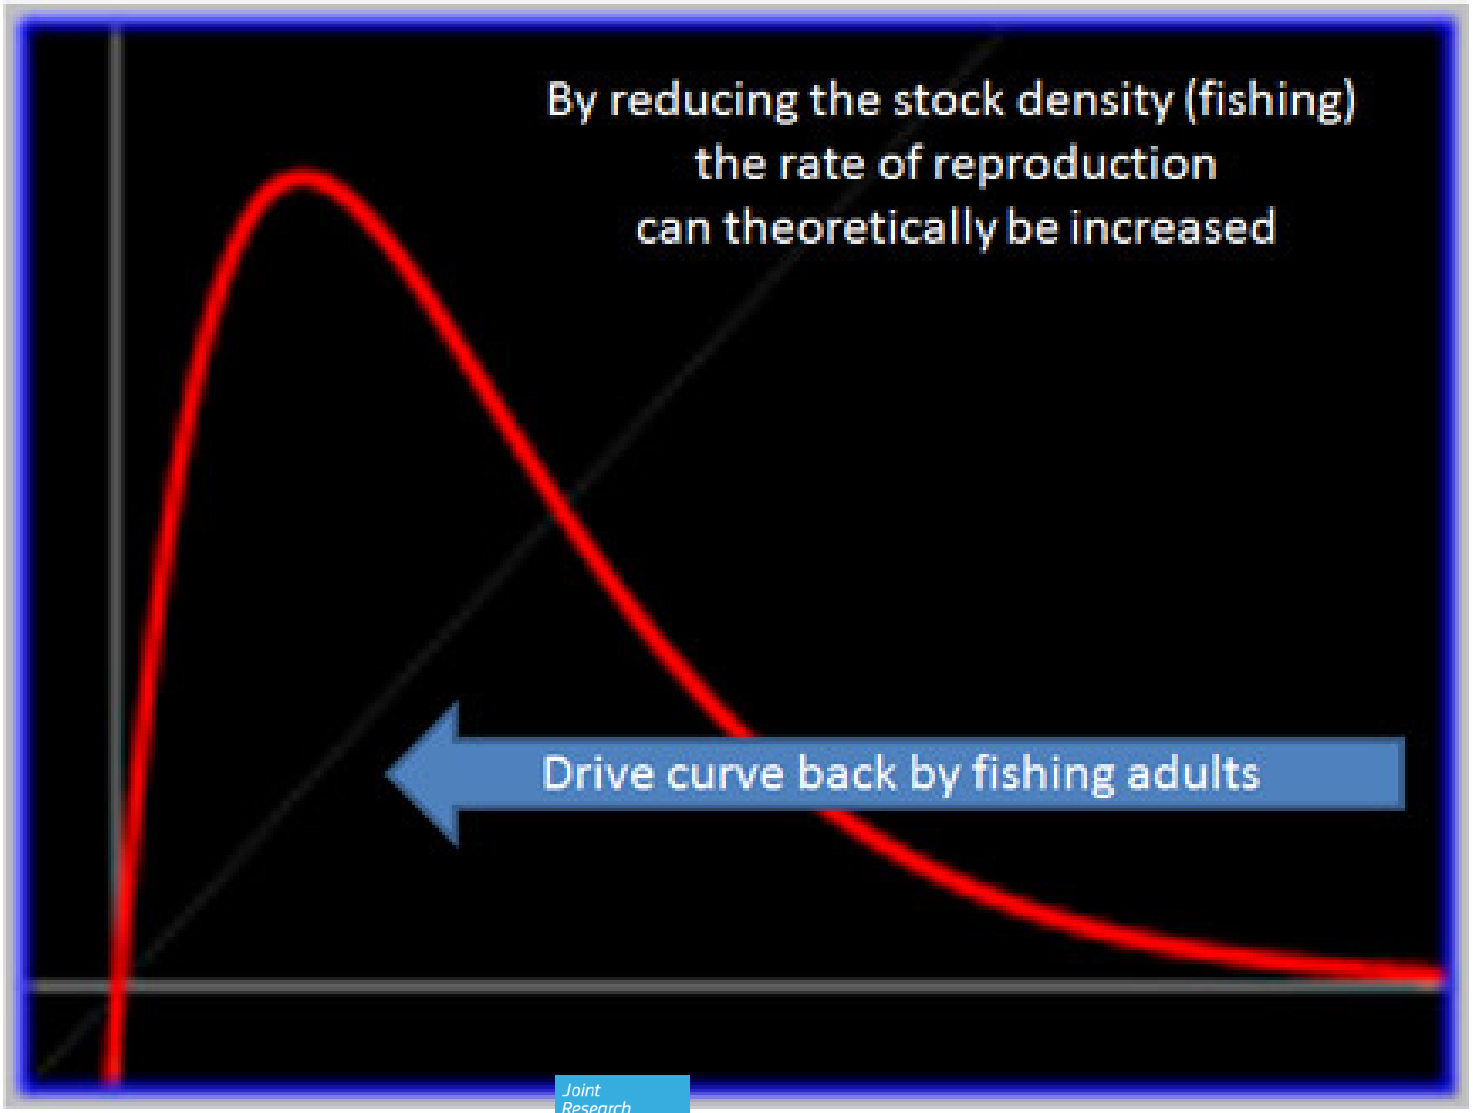


Descendencia promedio producida por rocotes bermejos de tres tamaños diferentes.
Datos: Love et al. (1990) NOAA Technical Report

Ricker stock recruit function

$$\text{Recruitment} = a \times \text{SSB} \times e^{-b \times SSB}$$

Net Reproduction



Some reading on stock recruit models
